Intraspecific Diversity, what is it?

ITD Definition

○ — Species one, □ — Species two

Intraspecific Diversity, what is it?

ITD Definition

○ — Species one, □ — Species two

Facets of Intraspecific Diversity

- Richness (what amount of the trait space is occupied by individuals of the same species?)
- Evenness (how is the trait space filled up by these individuals?)
- Divergence (any form of trait differentiation across these individuals?)

How is Intraspecific Diversity Measured?

- Via indices!
- We concentrate on **multi-trait indices**

Trait Richness

- FRic (Villegger et al., 2008)
- TOP (Fontana et al., 2016)

Trait Evenness

- FEve (Villegger et al., 2008)
- TED (Fontana et al., 2016)

Trait Divergence

- Rao (Rao, 1982)
- FDis (Lalibert & Legendre, 2010)

Something New?

Modified TED (TEDM)

Modified TOP (TOPM)

What to Expect from ITD Indices?

Simone's criteria and our proposed additional criteria
